

ANBARASU A N

Site Reliability Engineer (SRE) | DevOps & Cloud Engineer || AWS Certified Solutions Architect

Email: natarajananbarasu@gmail.com | **Phone:** +91 6382797079 | **Location:** Erode, Tamil Nadu, India.

LinkedIn: <https://www.linkedin.com/in/anbarasu-a-n/> | **Portfolio:** <https://anbarasu-a-n.netlify.app/>

PROFESSIONAL SUMMARY

Site Reliability Engineer with hands-on experience in cloud infrastructure, system reliability, observability, monitoring, automation, and DevOps practices. Skilled in designing, operating, and troubleshooting reliable and scalable infrastructure. Experienced in Linux system administration, networking, cloud infrastructure, Site24x7, monitoring, alerting, dashboards, incident troubleshooting, and performance analysis.

Proficient in Bash/Python automation, Docker, Kubernetes, Terraform, Jenkins, AWS CLI, CI/CD, and Infrastructure as Code (IaC) to automate operational tasks and improve deployment and infrastructure efficiency. Strong understanding of high availability, fault tolerance, scalability, backup, failover, security, access control, and system performance. Focused on building reliable, observable, secure, and automated systems while applying SRE, Cloud, and DevOps best practices to improve operational efficiency and service reliability.

PROFESSIONAL EXPERIENCE

Site Reliability Engineer (SRE) – Zoho Corporation | February 2026 – Present

- Monitor and maintain the reliability, availability, and performance of infrastructure supporting real-time audio and video communication services across Zoho Cliq, Zoho Meeting, and Arattai, ensuring critical machines and services remain healthy and operational.
- Monitor internal data-center infrastructure and multi-cloud environments across AWS, Oracle Cloud, Microsoft Azure, and Zoho, tracking infrastructure health, application availability, system performance, and overall service reliability.
- Monitor internal and external domains, application endpoints, and websites using Site24x7 and internal data-center monitoring platforms to identify DNS, connectivity, availability, latency, reachability, and service-level issues.
- Build and maintain monitoring dashboards, alerts, and observability mechanisms to improve infrastructure and application visibility, while analyzing network stability, packet loss, latency, connectivity, and reachability issues.
- Develop and optimize automation scripts to streamline repetitive operational tasks, reduce manual intervention, improve execution efficiency, accelerate troubleshooting workflows, and enhance operational productivity through AI-assisted approaches.
- Support infrastructure reliability and operational readiness through provisioning, scaling, backup, failover, health monitoring, security, permissions, access controls, service connectivity, and infrastructure configuration management.
- Collaborate with Cloud, Platform, Security, and Development teams to troubleshoot production issues, improve service reliability, maintain operational security and compliance, and implement SRE and DevOps best practices.

AWS Cloud Virtual Intern – AWS Academy | March 2022 – May 2022

- Completed a 10-week internship, gaining practical experience in AWS services such as EC2, S3, IAM, and CloudWatch, and deployed mock infrastructures simulating real-world scenarios.
- Built and deployed a 3-tier architecture lab project that demonstrated secure, fault-tolerant AWS-based infrastructure, simulating a production-grade environment.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (Score: 977/1000) – AWS
- AWS Certified Cloud Practitioner (Score: 967/1000) - AWS
- Google UX Design Professional Certificate – Coursera, Google

TECHNICAL SKILLS

- **SRE & Observability:** Site24x7, Monitoring, Alerting, Dashboards, Observability, Incident Troubleshooting, Availability & Reliability Monitoring, Performance Monitoring
 - **DevOps & Automation:** Linux, Bash/Shell Scripting, Python, Jenkins, Docker, Kubernetes, Terraform, AWS CLI, CI/CD, Infrastructure as Code
 - **Frameworks & Programming Languages:** Spring Boot (Java), React, Redux, JWT, Java, JavaScript, Node.js.
 - **Tools & Platforms:** Docker, Git, VS Code, Bash, MySQL, PostgreSQL, MongoDB.
 - **Networking:** TCP/IP, DNS, HTTP/HTTPS, TLS/SSL, Routing, NAT, Network Troubleshooting, Connectivity Monitoring, Latency & Packet-Loss Analysis
 - **System Administration:** Linux, systemd, journald, Process Management, File Descriptors, Resource Monitoring, Service Management, Access & Permissions
-

EDUCATION

- **Bachelor of Technology - Information Technology**
Sri Krishna College of Engineering and Technology, Coimbatore, CGPA: 7.3 (September 2022 – April 2025)
 - **Diploma in Computer Engineering**
Sakthi Polytechnic College, Erode, Percentage: 93% (June 2019 - June 2022)
-

PROJECTS

AWS Cloud Infrastructure Deployment Project – AWS, RDS, ALB, ASG, Nginx, React, Java, PostgreSQL [Link](#)

- Designed and deployed a complete full stack application on AWS using a multi-tier architecture with public and private subnets, EC2 instances for frontend and backend, RDS for database, and S3 for static storage.
- Configured Nginx as a reverse proxy to route frontend and backend traffic securely, integrating Application Load Balancers (public for frontend, internal for backend) with dedicated Target Groups and health checks.
- Implemented Auto Scaling Groups for both tiers to ensure high availability, scalability, and cost optimization across multiple availability zones.
- Automated deployment using shell scripts and systemd services for backend and frontend components.
- Applied IAM user access and security groups for secure communication between resources, achieving a production grade, fault tolerant AWS environment.

Agriculture Loan Portal – Java (Spring Boot), React, PostgreSQL, JWT, Redux, AWS [Link](#)

- Developed a secure, full-stack platform to automate and streamline agricultural loan applications and approval workflows.
- Engineered RESTful APIs using Spring Boot with JWT-based authentication for secure session management and access control.
- Designed a responsive React frontend with Redux for robust state management and improved user experience.
- Integrated PostgreSQL for efficient relational data handling and optimized query performance.
- Deployed on AWS with auto scaling enabled, optimizing resource utilization and reducing infrastructure costs by 10%.

Portfolio Website – React, Docker [Link](#)

- Created a personal portfolio website using React to showcase projects, technical skills, and certifications through a clean, responsive user interface.
 - Implemented mobile-first design principles and cross-browser compatibility to optimize user experience across devices.
 - Containerized the application using Docker for consistent local development and streamlined deployment.
-

PROFESSIONAL INTERESTS

- Site Reliability Engineering, observability, production monitoring, cloud infrastructure, DevOps automation, and Infrastructure as Code.
- Building reliable, secure, highly available, and automated systems across data-center and multi-cloud environments.
- Continuous learning in cloud-native technologies, networking, system reliability, automation, and AI-assisted operations.
